

# VARTOR Technology Solutions

- VARTOR provides consulting, engineering and system integration services.
- Our areas of expertise include electronics and computer engineering, instrumentation, automation, and software programming among others.

# System Integration

We develop custom-made systems to address our client's specific needs by *integrating* existing technologies to work together as the desired solution.

This approach takes advantage of proven technologies, shortens the development time, cost significantly less and makes maintenance easier.

# Selected Projects

Next you will find a sample of projects we have completed over the years.

These sample projects are mostly for the medical devices industry. However, we can develop solutions for your industry too.

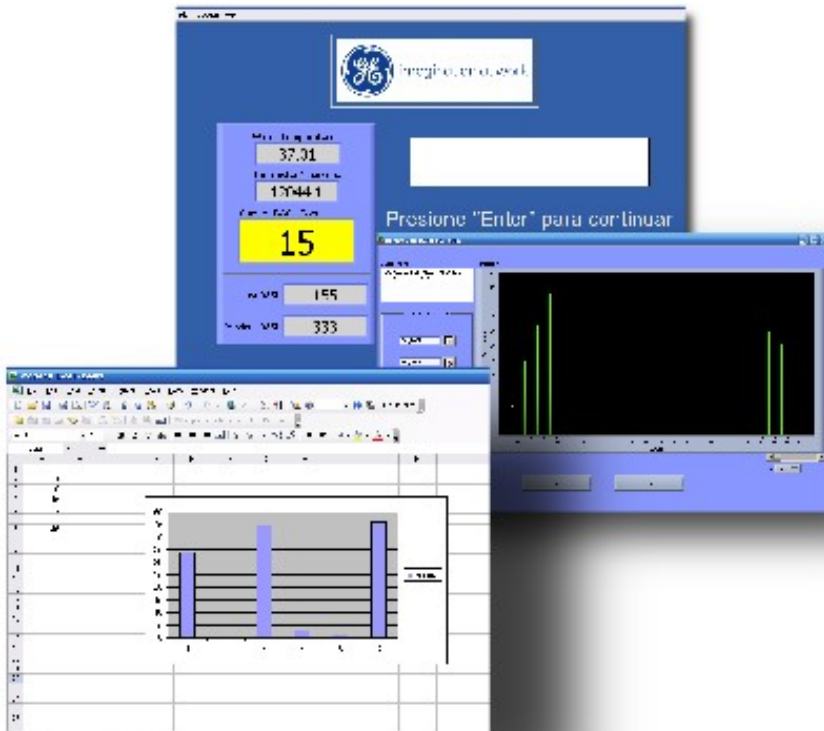

# NewGen CATS

VARTOR designed and developed the Next Generation Catheter Automated Test Station for Edwards Lifesciences.

This system is responsible for performing electrical and high potential tests on catheters.

# Bridge Calculator

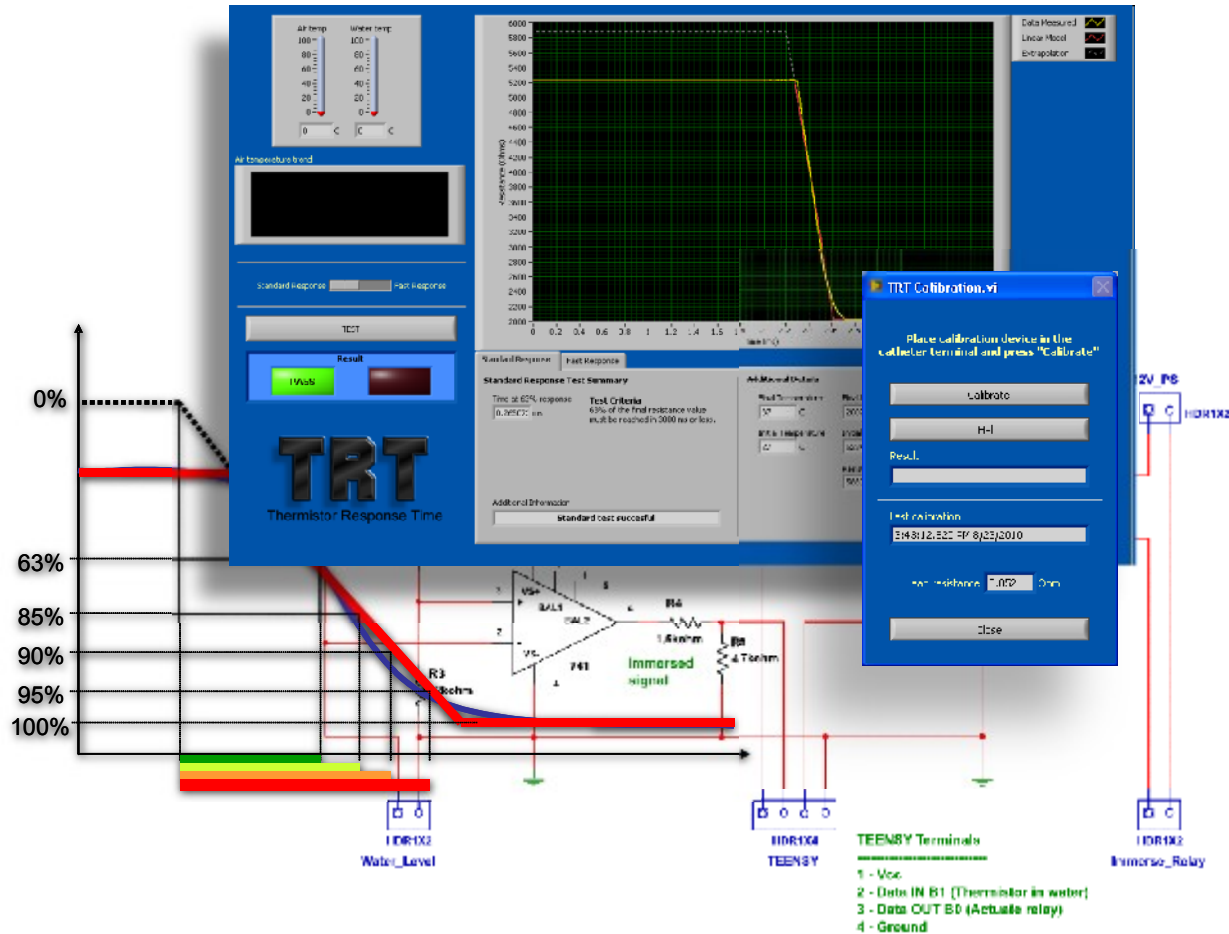

VARTOR developed the new version of the Bridge Calculator for General Electric Sensing division in Puerto Rico.

This system measure the value of a thermistor at a controlled temperature to calculate the compensation “bridge” code.

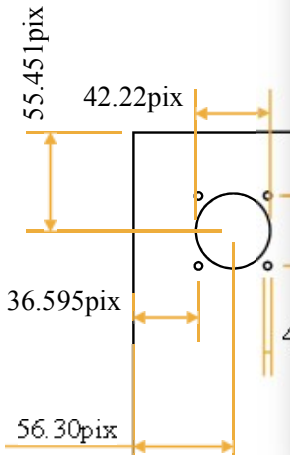

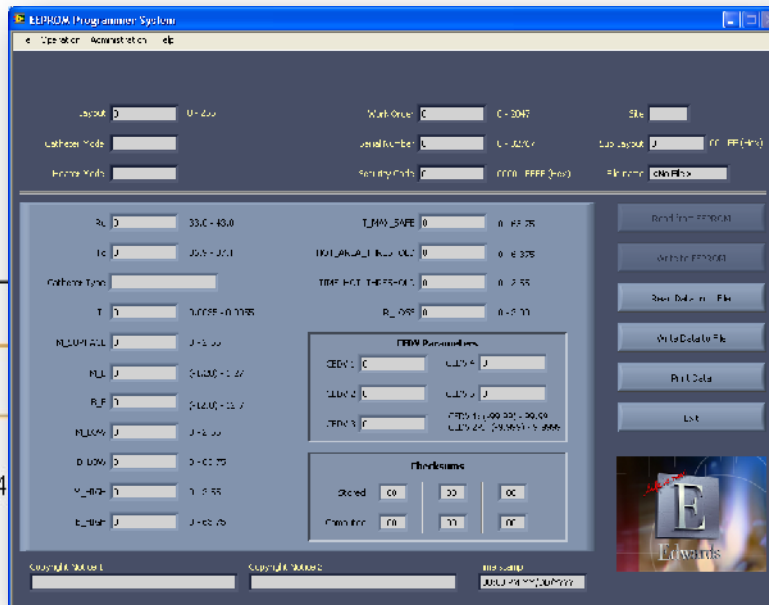

# TRT Station

VARTOR designed and developed the Thermistor Response Test Automated Station for Edwards Lifesciences.

This system is responsible for evaluating the performance of catheters to a sudden change in temperature.

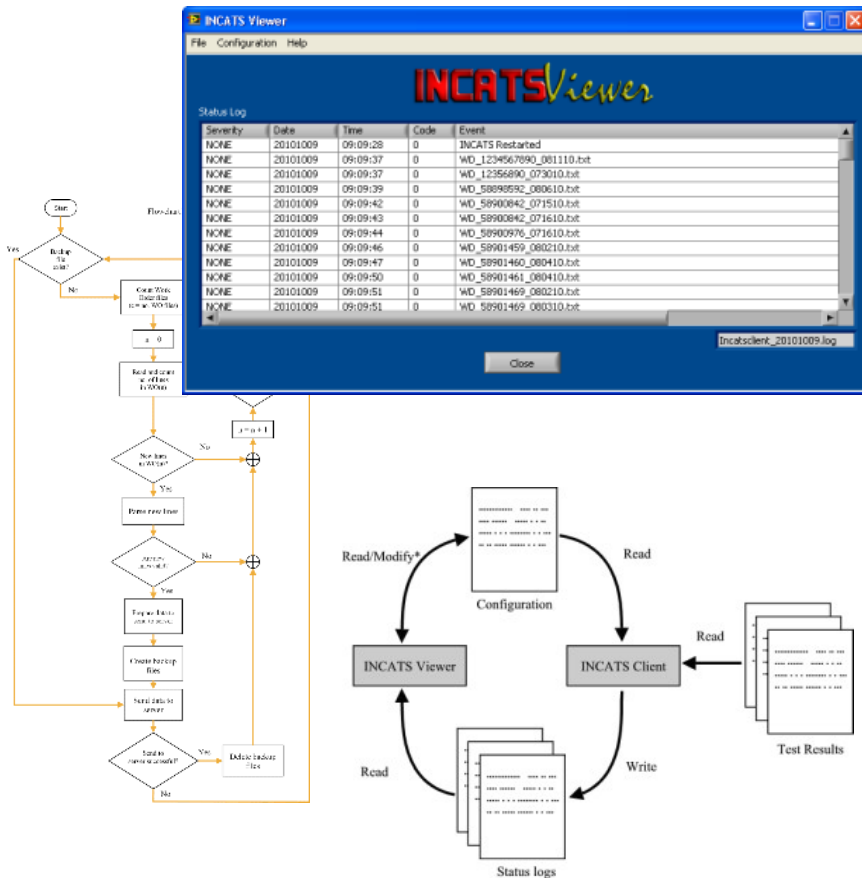

# EEPROM Reader

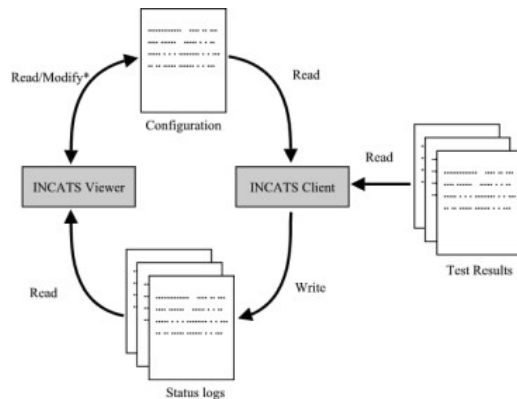

VARTOR designed and developed the new version of the EEPROM reader for Edwards Lifesciences.

This system is used to verify the content of the internal memory found on catheters.

# INCATS

- VARTOR designed and developed the Infinity-CATS for Edwards Lifesciences.
- This system is designed to transfer data collected by multiple test stations to a central database.

\*\*Modify\* can only be done by administrators

# Our Philosophy

- We are committed on forging **strong relationships with our clients** through **openness and honesty**
- We strive in achieving a **quality solution** by reducing and eliminating errors since the beginning of the development cycle, thus **maximizing the return of investment**
- **Reasonable and fair pricing**
